PHP Developer at Review India

Role - PHP Developer

March 2023 – August 2023

Kolkata, West Bengal

- Worked on multiple web development projects using PHP, following MVC architecture and coding best practices.
- Handled MySQL database operations including designing schema, writing optimized queries, and maintaining data integrity.
- Collaborated with the development team to analyze requirements, debug code, and improve application performance.

PROJECTS

Billtrack (Billing Application) | Laravel, JavaScript, PHP, Node.js

- A GST billing software where customers can register their business and log in via OTP authentication.
- Customers can select a GST type, create categories, add items, and generate bills easily.
- The platform also allows customers to create users to manage their business operations.
- Includes various additional features to streamline billing and business management.
- API implemented using Node.js to enable smooth communication and data handling.

Bike Booking Web Application | Laravel, JavaScript, PHP

- Developed a bike booking web application for Debnath Honda that showcases product details including bikes, scooters, etc.
- Implemented key features such as online booking for vehicles and service appointment scheduling to streamline dealership operations.

Multi Level Marketing (Suvidacare) | PHP, JavaScript

- Developed a Multi-Level Marketing (MLM) based e-commerce platform with three distinct panels: Admin, Distributor, and Member.
- Distributor Panel: Tracked downline members, commission earnings, product purchases, and payout history.
- Member Panel: Enabled product browsing, purchasing, referral, and commission tracking.
- Admin Panel: Managed distributors, orders, commission rules, and performance analytics.
